

# Discover the HKSH Medical Hub in Hong Kong East – a Centre of Medical Excellence

HKSH EASTERN MEDICAL CENTRE

HKSH TSAO YIN KAI BLOCK

Featuring the First  
Proton Therapy System  
in Hong Kong  
State-of-the-Art  
In-patient Facilities

HKSH Eastern Medical Centre, Tsao Yin Kai Block is situated in the eastern region of Hong Kong Island. It is home to several cutting-edge medical facilities, such as the first proton therapy system in Hong Kong, state-of-the-art diagnostic equipment, and excellent inpatient accommodations with various ward options, including isolation wards. Our team of experienced medical professionals is dedicated to providing personalised treatment and attentive care to optimise clinical outcomes for our patients.

## HKSH Proton Therapy Centre

**HKSH Proton Therapy Centre** is equipped with the first proton therapy system in Hong Kong. Proton Therapy is considered to be one of the most advanced forms of radiotherapy available in the world. The proton therapy system utilises high-energy and high-precision proton beams to precisely target cancer cells with minimal side effects.

The proton therapy is particularly well-suited for treating paediatric cancer, as well as other types of cancer, including brain, head and neck, lung, liver, prostate, and more. Its precise and targeted radiation treatment minimises the risk of damage to surrounding healthy tissues, making it an effective and safe treatment option for a wide range of cancers.

## HKSH Cancer Centre (Island East)

**HKSH Cancer Centre (Island East)** provides comprehensive and holistic cancer management that covers a wide range of areas, including radiotherapy, chemotherapy, targeted therapy, hormone therapy, immunotherapy, cellular therapy, nuclear medicine therapy, and more. The Centre is also equipped with world-class, cutting-edge cancer treatment technologies, such as the Asia's first clinically applied MR Linac, Radixact X9 and Hong Kong's first proton therapy system. These advanced technology enable us to provide patients with the most precise, personalised and effective treatment options.

Our multidisciplinary medical team has the depth of expertise to tackle even the most complex cases, and each patient is assigned with a case nurse to provide personalised support throughout their treatment journey. We also offer a wide spectrum of clinical and support services, including genetic screening and diagnosis, cancer therapies, pain management, rehabilitation, psychological counselling and dietary advice, all tailored to meet to the individual needs of patients.

In addition to offering comprehensive medical care, HKSH Cancer Centre (Island East) is also committed to driving clinical research and technological innovations to support our patients with the optimal care and the best possible clinical outcomes, from diagnosis to recovery.

- HKSH Comprehensive Oncology Centre (Island East)
- HKSH Haematology and Cellular Therapy Centre (Island East)
- HKSH Paediatric Haematology & Oncology Centre (Island East)
- Chemotherapy Day Centre (Island East)
- HKSH Radiotherapy Centre (Island East)

## HKSH Diagnostics Centre (Island East)

At **HKSH Diagnostics Centre (Island East)**, we offer a comprehensive range of diagnostic and imaging equipment to support different medical specialties. Our services include X-ray imaging, ultrasonography, computed tomography, magnetic resonance imaging, mammography screening, bone density examinations, image-guided interventional treatments, and positron emission tomography, among others. Our efficient diagnostic services enable swift and accurate diagnoses, allowing doctors to devise better clinical recommendations and treatment plans.

HKSH Diagnostics Centre (Island East) also offers advanced clinical and molecular pathological laboratory services, such as blood tests to assess organ functions (e.g. liver, kidney, heart, thyroid, bone, etc.), rapid response tests for infectious diseases, cancer genetic diagnosis and predictive biomarker testing. These services enable us to provide our patients with the most accurate and timely diagnoses possible, ensuring that they receive the best possible care.

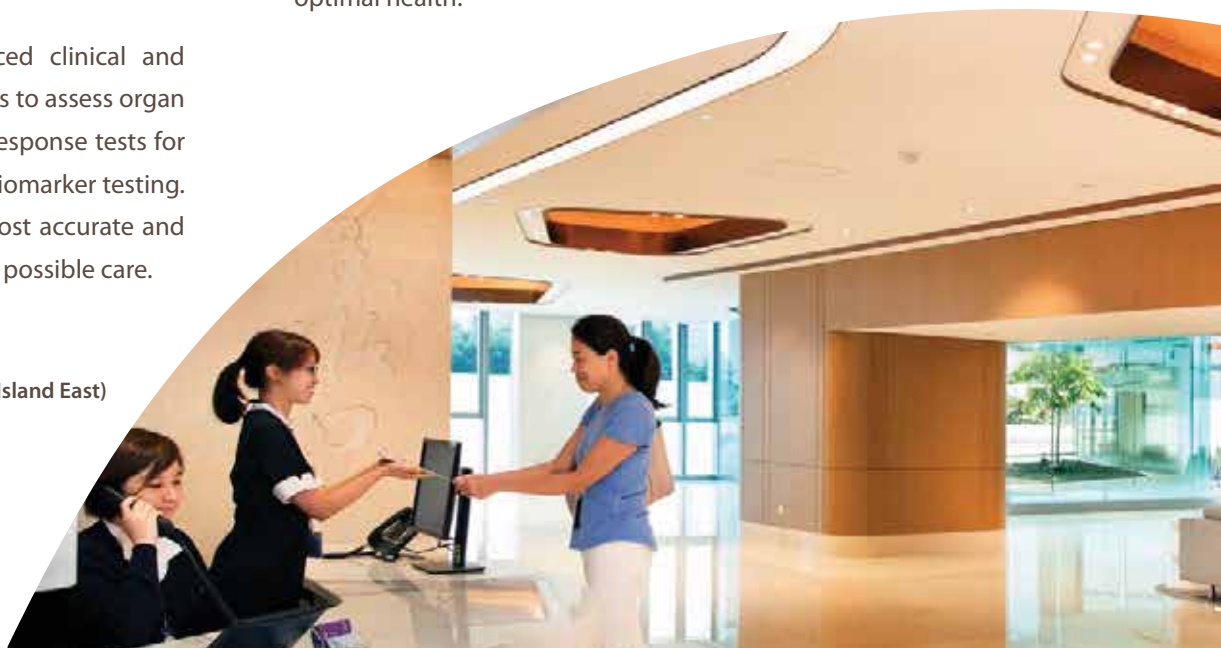

- Department of Diagnostic & Interventional Radiology (Island East)
- Clinical Pathology Division (Island East)
- Department of Nuclear Medicine & Positron Emission Tomography (Island East)

## HKSH Family Medicine and Primary Care Centre (Island East)

**HKSH Family Medicine and Primary Care Centre (Island East)** is an integral part of HKSH Healthcare network of outpatient clinics. Through seamless integration of patient record system, our doctors are able to gain a thorough understanding of a patient's medical history and cater to their individual needs by providing personalised recommendations for services such as vaccinations and health screenings. We are fully committed to ensuring our patients' wellbeing and continue to strive towards enhancing the quality of healthcare within our community.

Our **Health Assessment Department (Island East)** offers diverse assessment packages and cancer screening plans for you according to your needs. A team of healthcare professionals provide personalised advice on lifestyle, diet and behavior based on the assessment results, empowering you to achieve optimal health.

HKSH LI SHU FONG BUILDING

## Cancer Management Diagnostics & Imaging Family Medicine

HKSH Li Shu Fong Building is a prominent medical facility located in HKSH's medical hub in Hong Kong East. The building is designed to offer a comfortable and contemporary environment for patients to receive top-tier medical care. It houses a diverse range of clinics and centres including the HKSH Cancer Centre (Island East), HKSH Diagnostics Centre (Island East), and HKSH Family Medicine and Primary Care Centre (Island East). In addition, we provide an extensive range of other medical services such as health assessment, geriatric medicine, podiatry services, clinical health psychological services, and dietetic services, all delivered by highly trained medical professionals who utilise cutting-edge equipment and technologies. The facility is conveniently accessible by public transportation, making it a prominent medical landmark in the eastern part of Hong Kong Island.
